ABSTRACT

A proctoscope which comprises a body preferably in the form of a hollow cylinder which makes it possible to insert it in the anal canal of a patient. The body of the proctoscope is provided with a construction as a level of the part of a distal end and with an aperture and a handhold on the other end. The body of the proctoscope is also provided with a passage in order to form a surgical window oriented towards the internal free zone thereof. The surgical window is formed in the external wall of the body in such a way that it can enter the part of the distal end by contracting itself.
